

[Quick start](#)[Data binding](#)[Data sources](#)[Load and save](#)[Setting options](#)[Using callbacks](#)[Styling](#)[Handsontable PRO](#) / 3.0.0 ▼ / [Basic usage](#) / [Quick start](#)[Switch to CE](#)

Quick start

Follow these steps to install Handsontable Pro:

1. [Install](#)
2. [Create](#)
3. [Initialize](#)
4. [Alternative installation](#)

Step 1: Install

There are many ways to install Handsontable Pro but we suggest using [npm](#). Just type in the following command:

```
npm install handsontable-pro
```

After the installation process is finished, embed this code inside your HTML file:

Step 2: Create

Add an empty `<div>` element that will be turned into a spreadsheet. Let's give this element an "example" ID.

```
<div id="example"></div>
```

Step 3: Initialize

In the next step, pass a reference to that `<div class="example">` element and fill it with sample data:

```
var data = [
  ['', 'Ford', 'Tesla', 'Toyota', 'Honda'],
  ['2017', 10, 11, 12, 13],
  ['2018', 20, 11, 14, 13],
  ['2019', 30, 15, 12, 13]
];

var container = document.getElementById('example');
var hot = new Handsontable(container, {
  data: data,
  rowHeaders: true,
  colHeaders: true,
  filters: true,
  dropdownMenu: true
});
```

Step 4: The result

That's it, now your Handsontable Pro is up and ready to use:

	A ▼	B ▼	C ▼	D ▼	E ▼
--	-----	-----	-----	-----	-----

2018	20	11	14	13
2019	30	15	12	13

nd the data source but also save the changes made in Handsontable Pro? Head to [Binding data](#) page to learn more about it.

Alternative installation

Find all the available installation options on the [Download Handsontable Pro](#) page.
